Handheld Ticket Writing Module  
BOSSCARS Software System

**Available Features:**

- Permit and license plate lookup
- Photographs
- Barcode scanning
- Chalk time
- Mobile printing
- Citation history
- VIP/Scofflaw
- Water/Dust/Drop resistant

## HANDHELD TICKET WRITING MODULE

The Handheld Ticket Writing Module is designed to fully automate the citation/ticketing process. Officers in the field have the ability to retrieve information about vehicles and permits, permit status (active, lost, stolen, expired, etc.), Boot/Tow, and VIP status. Messy, handwritten tickets are eliminated, reducing erroneous and duplicate data.

The handheld ticket writers provide “photo on file” capability, eliminating disputed citations. Barcode scanning minimizes data entry and errors. Chalk Times are easily tracked, allowing for quick identification of vehicles over the limit.

At the end of an officer's shift, citation information is automatically uploaded to BOSSCARS via ActiveSync. When the download is complete, the citation information is inserted into BOSSCARS and may be automatically placed on a customer's account in the Campus Information System, if desired.
