Web Interface Module
BOSSCARS Software System

Available Features:

Parking permits

Vehicle registration

Citations

Appeals

Web-based

Role-based login

WEB INTERFACE MODULE

The BOSSCARS Web Interface allows customers to apply for parking permits, register vehicles, retrieve information about outstanding parking citations, and submit appeals online. By utilizing a role-based security system, the Web Interface Module is able to control the information visible based solely on login. For example, a student who logs in has access to their specific data, whereas the Parking Administrator, who logs in to the same portal, would have access to administrative data and record tables.

Depending on the rules of the institution's parking office, customers who use the Web Interface may apply online, print temporary permits, and chose a method to receive their permit (via mail, or in person). Permit fees can automatically be added to customer accounts in the Campus System, or permit fees can be paid online through a third party source.
