- 200+ Reports
- Daily Call Logs
- Supplemental Reports

BOSSCOPS is a Clery-Compliant incident management and dispatching system. Like all BOSS SOFTWARE, it integrates in real-time with Oracle® - based Campus Systems and eliminates the need for batch file processing. It is our goal to provide you with the most functional, user-friendly, and customized software on the market. By eliminating the need for new hardware and file transfers, BOSSCOPS is the ideal solution for your Campus Safety department as well as your IT staff.

We know that safety is your first priority, and we've designed BOSSCOPS to meet that expectation. Service calls are easily turned into incidents, and priority calls are automatically displayed for quick dispatching. A single screen allows you to easily track incidents, suspects, witnesses, victims, arrestees, evidence, property, and disciplinary actions. The same screen supports supplemental information like photographs, voice recordings, handwritten statements, and much more. Combined with quick, easy, and customizable reporting BOSSCOPS keeps your staff in the field, not behind a computer.

BOSSCOPS is all about saving time. Over 200 reports can be generated at the click of a button. Whether tracking hate crimes, generating daily call logs, or reporting to the Department of Education, BOSSCOPS provides the most efficient solutions available. Reports can be created in a variety of formats, including bar graphs and pie charts. Drill-down capability allows more detail to be viewed from a report instantly.

BOSSCOPS provides an easy-to-use application designed for efficiency. Direct integration with Oracle maximizes your institution's existing equipment and investment. Most importantly, it is backed by our outstanding, professional, and personalized customer support. For over 10 years. We've grown as a partner and a mentor for our clients. Every step of the way, we're right beside you. That's why we are Your Partner in Incident Management Software.
